*Your Partner in Special Transport.*

On July 6th 2005, London won the chance to host the 2012 Olympic games. Since then, a former run down part of East London has been undergoing a unique transformation into what will be one of the worlds most impressive sporting arenas!

Since the early days of development, Teahan Convoi Service has been involved in escorting a large number of loads in & out of the site, as well as surrounding sites associated with the project. It started with loads such as demolition machines going in to clear the former industrial buildings which once stood on the site and tunnel boring machines needed to construct tunnels for the diversion of overhead power lines. As well as the many large items of plant & machinery TCS has safely escorted into the London site, other such loads include heavy concrete structures and wide steel fabrications.... Up to 7.3 meters wide in fact!
